## Task-2a:

$$\text{Entropy} = - \sum_{i=0}^{c-1} p_i(t) \log_2 p_i(t)$$

Entropy\_High:

$$p(\text{Yes}) = 3/7, p(\text{NO}) = 4/7$$

$$= -\left(\frac{3}{7}\right) \log_2 \left(\frac{3}{7}\right) - \left(\frac{4}{7}\right) \log_2 \left(\frac{4}{7}\right)$$

$$p(\text{Yes}) = -\frac{3}{7}(-1.22239) - \frac{4}{7}(-0.8073)$$

$$= 0.5238 + 0.4613$$

$$p(\text{Entropy-High}) = 0.98511$$

Entropy Normal:

$$P(\text{Yes}) = 6/7, \quad P(\text{No}) = 1/7$$

$$\begin{aligned}\text{Entropy Normal} &= -\frac{6}{7} \log_2(6/7) - \left(\frac{1}{7}\right) \log_2(1/7) \\ &= -\left(\frac{6}{7}\right)(-0.22239) - \left(\frac{1}{7}\right)(-2.80735) \\ &= 0.19062 + 0.40105 \\ &= 0.59167\end{aligned}$$

weighted Average:

weighted Average of conditional entropies =

$$\begin{aligned}&\left(\frac{7}{14}\right) \times \text{Entropy-High} + \left(\frac{7}{14}\right) \times \text{Entropy-Normal} \\ &= \left(\frac{7}{14}\right)(0.98511) + \left(\frac{7}{14}\right)(0.59167) \\ &= 0.4925 + 0.2958 \\ &= 0.7883\end{aligned}$$

Information gain = Entropy play - weighted conditional

$$p(\text{yes}) = 9/14, \quad p(\text{no}) = 5/14$$

$$\text{Entropy}(\text{play}) = \left(-\frac{9}{14}\right) \log_2\left(\frac{9}{14}\right) - \left(\frac{5}{14}\right) \log_2\left(\frac{5}{14}\right)$$

$$= \left(-\frac{9}{14}\right)(-0.6374) - \frac{5}{14}(-1.4854)$$

$$= 0.4097 + 0.5305$$

$$\text{Entropy}(\text{play}) = 0.9402$$

Therefore,

Information gain of humidity

$$= 0.9402 - 0.7883$$

$$= 0.1519$$

**.Task-3a:**

Task - 3

True - labels =  $[1, 0, 1, 0, 1, 1, 0, 0, 1, 0]$

Predicted - labels =  $[1, 1, 1, 0, 1, 0, 0, 1, 1, 0]$

$0-0=0$

confusion Matrix

	Predicted Negative (0)	Predicted Positive (1)
Actual negative (0)	True Negative (TN)	False Positive (FP)
Actual positive (1)	False Negative (FN)	True positive (TP)

True positive (TP) = 4

True Negative (TN) = 3

False positive (FP) = 2

False Negative (FN) = 1

So, the resultant confusion matrix is

	Predicted Negative (0)	Predicted positive (1)
Actual negative (0)	3	2
Actual positive (1)	1	4

$$\text{Accuracy: } \frac{TP+TN}{TP+TN+FP+FN}$$

$$= \frac{4+3}{4+3+2+1} = \frac{7}{10} = 0.7$$

$$\text{Precision: } \frac{TP}{TP+FP} = \frac{4}{4+2} = \frac{4}{6} = 0.666$$

$$\approx 0.67$$

$$\text{Recall} = \frac{TP}{TP+FN} = \frac{4}{4+1} = \frac{4}{5} = 0.8$$

$$F_1 \text{ score} \Rightarrow \frac{2 \times \text{Precision} \times \text{Recall}}{\text{Precision} + \text{Recall}}$$

$$= \frac{2 \times 0.67 \times 0.8}{0.67 + 0.8}$$

$$= \frac{1.072}{1.47} = 0.729$$

$$\begin{aligned}\text{False Positive Rate (FPR)} &= \frac{FP}{FP+TN} \\ &= \frac{2}{2+3} = \frac{2}{5} = 0.4\end{aligned}$$

$$\begin{aligned}\text{True Positive Rate (TPR)} &= \frac{TP}{TP+FN} \\ &= \frac{4}{4+1} = \frac{4}{5} = 0.8\end{aligned}$$

$$\begin{aligned}\text{Specificity} &= \frac{TN}{TN+FP} \\ &= \frac{3}{3+2} = \frac{3}{5} = 0.6\end{aligned}$$

$$\begin{aligned}\text{Negative Predictive Value (NPV)} &= \frac{TN}{TN+FN} \\ &= \frac{3}{3+1} = \frac{3}{4} \\ &= 0.75\end{aligned}$$
